CONDITIONS GOVERNING THIS REPORT

- 1. This report is limited to the five organisms listed.
- 2. This report covers only those structures listed on the front.
- 3. Inspection, including sounding and/or probing, was performed in only those areas which were readily accessible. Inaccessible areas not inspected include, but are not limited to areas obstructed by, floor coverings, wall coverings, siding, fixed ceilings, insulation, furniture, appliances or other personal items.
- 4. Reporting of Wood Destroying Fungi on this report is intended to cover only infestations which occur below the first floor level and which result from moisture conditions which can be corrected through application of moisture barriers and/or increased ventilation and is not intended to cover conditions resulting from roof or plumbing leaks, or improper drainage of surface water.
- 5. The term Wood Boring Beetles as used on the reverse side means only those beetles which are known to establish and maintain a continuing infestation in structures, such as, but not limited to the Old House Borer.
- 6. Regardless of whether any visible evidence of infestation by any of the listed Wood Destroying Organisms is found during inspection, if an infestation of one or more of these organisms from which apparent freedom was certified is found within 90 days of issuance of this report the property shall receive, free of charge, a minimum adequate treatment for control of the infestation consistent with Rules 620-6-.03(1)(a), (b), (c), and (d), of the Georgia Structural Pest Control Act. Any Condition Conducive to infestation as defined in item nine (9) below that is known to have existed at the time of inspection and was not reported and is found within two (2) years from the date of the report shall be corrected free of charge by the licensee.
- 7. This is not a structural report. A wood destroying organism inspector is not ordinarily a construction or building trade expert and is therefore not expected to assess structural soundness. Evaluation and correction of damage which may have resulted from an active or previous infestation should be performed by a qualified inspector in the building trade, who is approved by the purchaser and the lending agency.
- 8. This report implies no responsibility on the part of the Georgia Department of Agriculture or the Georgia Structural Pest Control Commission to enforce or require anything other than treatment or retreatment to the minimum adequate treatment requirements specified in Rule 620-6-.04.
- 9. Conditions Conducive To Infestation - means conditions that exist in a structure that favor the development of wood destroying organisms. These are limited to: cellulosic material underneath a building, wood in contact with the soil which has not been treated with preservatives to a minimum preservative retention rate of 0.40 pounds per cubic foot for ground contact and ventilation that does not meet the requirements specified in Rule 620-6-.04(1)(a)(7).
